

AAW Z SERIES UNIVERSAL - DEALER PRODUCT LITERATURE

Z05 AuAg

AuAg Launch Edition

A compact universal hybrid for listeners who rotate music, sources, and moods. Z05 AuAg combines 10mm dynamic-driver punch, armature clarity, TwinCore physical voicing, hand-finished AuAg shell work, and a practical cable kit for daily use.

Those who listen will find the way.

POSITIONING

Dealer-facing product narrative

Z05 AuAg should be positioned as a small but serious universal-fit hybrid IEM: easy to carry, easy to drive, visually distinctive, and flexible enough for changing playlists.

Compared with a one-signature demo monitor, Z05 AuAg is built around rotation: albums, playlists, phone dongles, DAPs, compact DAC/amps, desktop chains, and listening moods that change by the hour.

The launch edition identity is AuAg: gold and silver accents over hand-finished shell work, with forged-carbon faceplates doing the visual heavy lifting.

CORE SELLING POINTS

What dealers should lead with

Daily universal hybrid	A compact universal shell with over-ear cable routing and LiquidMorph tips for repeatable seal and comfort.
TwinCore physical voicing	A two-position switch on the shell changes overall voicing without tools, apps, or recessed micro-slots.
Dynamic-driver body	A 10mm PET diaphragm dynamic woofer gives kick drums and bass lines real pressure and texture.
Armature clarity	Mid and super-high BA drivers add vocal edge, cymbal air, and room cues without thinning the body.
Signal-chain ready kit	2-pin detachable cable with 3.5mm stereo, 4.4mm balanced, and Type-C terminations in the box.

TWINCORE

Two listening moods, one physical switch

TwinCore is the feature that separates Z05 AuAg from a single-signature universal monitor. It lets the listener move between a fuller, easier presentation and a cleaner, more open presentation through a real switch on the shell.

Mode	Character	Dealer explanation
Blue Mode	Weight / Flow	Fuller low end, calmer upper harmonics, and an easier center image for long albums.
Red Mode	Focus / Spark	Tighter bass outlines, more forward clarity, and extra cymbal air when the mix needs to open up.

ACOUSTIC PLATFORM

Dynamic bass with hybrid detail

Z05 AuAg uses a 10mm PET diaphragm dynamic woofer as its low-frequency foundation, then layers mid and super-high BA drivers for vocal edge, cymbal air, and room cues. Bass-Flow vent pressure management helps stabilize dynamic-driver pressure and reduces the way fit movement affects the listening balance.

CRAFT, FIT, AND FINISH

Made to be worn, then looked at twice

The shell has to disappear before the finish gets to show off. Z05 AuAg starts with a compact universal fit, repeatable seal, and a driver layout that can stay convincing across long sessions. Forged-carbon faceplates carry the gold/silver identity, while the 3D-printed shell receives hand-laced foil work.

COMPLETE PACKAGE

Accessory and source-path reference

Z05 AuAg monitors	Left/right universal-fit hybrid IEMs with AuAg launch finish.
2-pin detachable cable	Braided cable with familiar monitor-side 2-pin connection for long-term flexibility.
3.5mm stereo termination	For standard analog outputs and broad compatibility.
4.4mm balanced termination	For DAPs and compact DAC/amps with balanced output.
Type-C termination	For direct use with compatible phones, tablets, laptops, and compact digital setups.
Carrying case	Storage and travel protection.
LiquidMorph eartips	Clear flange and teal bore; supports seal stability, bass pressure, and center image.

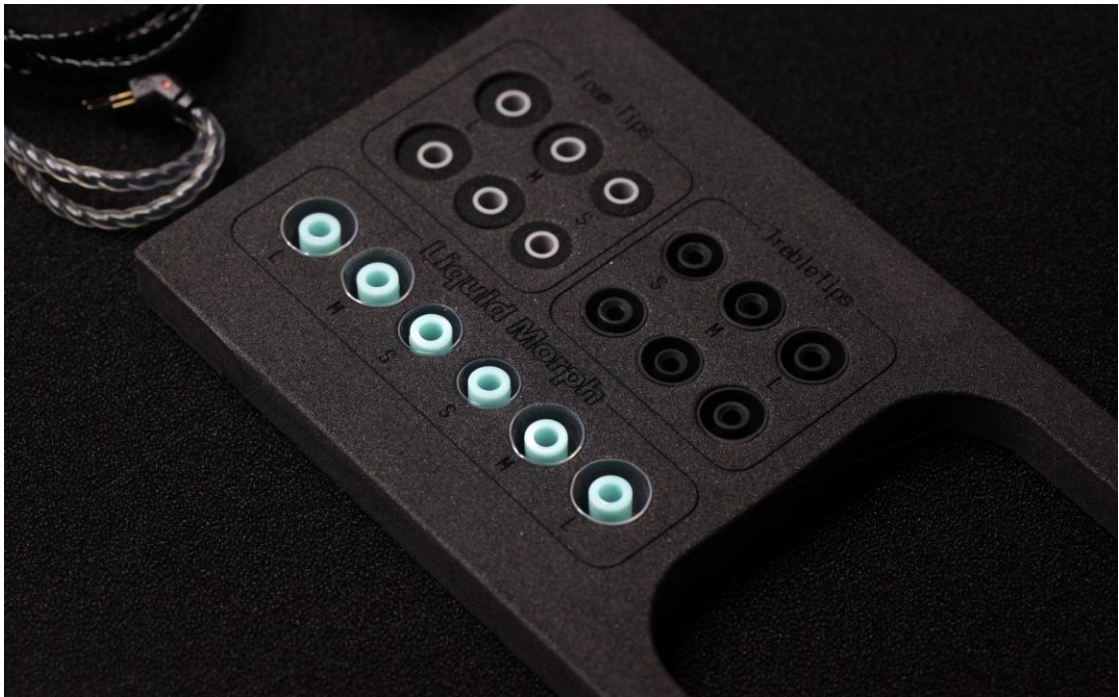

Product details and specifications

Product	AAW Z05 AuAg
Format	Universal-fit hybrid in-ear monitor
Low-frequency driver	10mm PET diaphragm dynamic woofer
Balanced armature system	Mid and super-high BA drivers for vocal edge and air
Voicing control	TwinCore physical voicing switch
Pressure management	Bass-Flow vent pressure system
Shell body	3D-printed universal monitor shell
Faceplate	Forged carbon with Au/Ag foil identity
Finish	Hand-laced gold and silver foil finish; pair-by-pair hand work
Cable connection	2-pin detachable monitor-side connection
Source terminations	3.5mm stereo, 4.4mm balanced, Type-C
Sensitivity	110dB @ 1kHz
Impedance	12 Ohm @ 1kHz
THD	<0.5% @ 1kHz

FIT AND EARTIPS

LiquidMorph is part of the tuning

With a dynamic woofer, seal is not a footnote. When the tip sits right, bass weight, vocal center, and left-right balance become stable. Dealers should fit the listener with the right LiquidMorph size before evaluating the sound.

Reference answers for product conversations

What does AuAg mean?	Au is gold, Ag is silver. On this launch edition, the identity is split left/right: gold and silver accents over hand-finished shell work, with forged-carbon faceplates carrying the visual identity.
Is this only a cosmetic edition?	No. The finish attracts attention first, but the reason to stay is the Z05 platform: dynamic bass, BA clarity, Bass-Flow pressure control, and TwinCore voicing.
What does TwinCore change?	It changes the overall voicing. Blue leans fuller and easier; red leans cleaner and more awake. The result feels broader than a simple bass bump.
Why do tips matter?	With a dynamic woofer, seal is part of the tuning. The right tip helps stabilize bass weight, vocal center, and left-right balance.
Who is the target listener?	Listeners who change albums and sources often, want one compact universal monitor for daily use, and value both physical bass and hybrid detail.

Choose the mood, keep the groove.

Those who listen will find the way.
