

AAW Z SERIES UNIVERSAL - AUAG LAUNCH EDITION

Z05 AuAg

Launch Edition

Z05 AuAg is the small universal you reach for when the playlist keeps changing. It keeps the 10mm dynamic-driver punch, adds armature clarity, and lets TwinCore shift the mood without swapping IEMs.

Those who listen will find the way.

AT A GLANCE

The build behind the listen

Dynamic Bass

Kick drums and bass lines have real skin and pressure, not just a lifted low-end shelf.

Hybrid Detail

Armatures bring vocal edges, cymbal air, and room cues without thinning out the body.

AuAg Finish

Forged-carbon faceplates carry the gold/silver identity; the shells are finished by hand, pair by pair.

TWINCORE

Same monitor, two listening moods

Some albums want warmth and weight. Others ask for cleaner edges and a little more air. TwinCore lets Z05 AuAg move between those moods with a real switch on the shell, large enough to nudge by fingernail while the monitors stay in your ears.

No tool, no tiny recessed slot, no guessing through a phone app. The action has just enough resistance, only two positions, and is easy to find by touch once you know where it sits.

Blue Mode - Weight / Flow	A fuller low end, calmer upper harmonics, and a center image that feels easier to sit with for long albums.
Red Mode - Focus / Spark	Tighter bass outlines, more forward clarity, and extra cymbal air when you want the mix to open up.

OVERVIEW

A compact hybrid for people who rotate music

Some IEMs are tuned for one perfect demo track. Z05 AuAg is built for the way most of us listen: albums, playlists, dongles, DAPs, desk chains, and a mood that changes by the hour.

FITMENT

A universal fit that still feels settled

The best tuning falls apart if the shell keeps shifting. Z05 AuAg keeps the body compact, routes the cable over-ear, and lets the tip do the sealing work.

SIGNAL CHAIN READY

One cable, the sources most of us actually use

No one wants to buy a new cable on day one. Z05 AuAg ships with the paths that cover the usual rotation: phone, dongle, DAP, and desktop stack.

SEAL & COMFORT

The tip is part of the tuning

With a dynamic woofer, seal is not a footnote. When the tip sits right, bass weight, vocal center, and left-right balance stop changing every time you move.

Made to be worn, then looked at twice

The shell has to disappear before the finish gets to show off. Z05 AuAg starts with a compact universal fit, repeatable seal, and a driver layout that can stay convincing across long sessions.

Format	Universal-fit hybrid in-ear monitor
Low End	10mm PET diaphragm dynamic woofer
Clarity	Mid and super-high BA drivers for vocal edge and air
Voice Control	TwinCore physical voicing switch
Pressure Flow	Bass-Flow vent pressure system
Finish	Forged-carbon faceplates; 3D-printed shells with hand-laced gold and silver foil finish
In The Box	2-pin detachable cable, 3.5mm, 4.4mm balanced, Type-C terminations, carrying case, LiquidMorph eartips

A few notes before you hit play

What does AuAg mean?

Au is gold, Ag is silver. On this launch edition, the identity is split left/right: gold and silver accents over the hand-finished shell work, with forged-carbon faceplates doing the visual heavy lifting.

Is this only a cosmetic edition?

No. The finish gets attention first, but the reason to stay is the Z05 platform: dynamic bass, BA clarity, Bass-Flow pressure control, and TwinCore voicing.

What does the TwinCore switch change?

It changes the overall voicing. Blue leans fuller and easier; red leans cleaner and more awake. It feels broader than a simple bass bump.

What cable is included?

Z05 AuAg includes a 2-pin detachable cable, 3.5mm stereo, 4.4mm balanced, and Type-C terminations, plus LiquidMorph tips so you can get the seal right from the first session.

Choose the mood, keep the groove.

Those who listen will find the way.

A launch-edition Z05 with real low-end body, armature detail, and a physical switch for the way your listening mood actually changes.
